

BLW-250-EX

Explosion proof ATEX fan

ATEX BLW-250-EX fan is designed for handling fluids in installations containing A3-type refrigerants. It ensures operator safety in the event of a leak or degassing by quickly diluting flammable vapors.

For optimal configuration, it is recommended to use a gas detector calibrated for R290 or R600a to monitor the air in the temporary hazardous area. We recommend the ATEX YT-1200H-S-R290 device from LINSTRUMENT®, which is particularly suited for this application.

SPECIFICATIONS

- Casing : steel
- Impeller blade : aluminum alloy
- Power : 180 W
- Voltage : 220 V
- Frequency : 50 Hz
- Speed : 25 r/min
- Flowrate : 25m³/min
- Total pressure : 245 Pa
- Insulation grade : F
- Ex-Mark : Ex db IIB T4 Gb
- Dimensions : 40cm (w) x 38cm (d) x 42cm (h)
